

Classroom Experiments

Student guide: building, running and reviewing your group's experiment

Your group designs a small randomized experiment as a survey, runs it on your classmates in class, gives feedback on other groups' experiments, and analyzes your own results. Everything happens on one site, on a laptop or a phone.

1. **Sign in** with the classroom code, the classroom password and your student ID.
2. **Form your group and build your survey.** One person creates it and invites the rest.
3. **Preview it** as a respondent and as the results screen, and fix any warnings.
4. **Your instructor locks all surveys** before class. You can still preview and download.
5. **Class day:** answer every other group's survey on your phone while each group presents, in the presentation order.
6. **Give feedback** to the groups you're assigned, plus any others you like.
7. **Download your responses** (anonymized) and analyze them.

1. Joining and signing in

You sign in with your SIS User ID and a password you choose the first time. Your name comes from the class roster, so there's nothing to type and no typos in the data used for grading.

- 1 Go to the site and click **Join Classroom**, or scan the QR code shown in class. Enter the **classroom code** and the **classroom password** your instructor gave you, then click **Join**.

The form is titled "Join a Classroom" in bold black text. Below the title, there are two input fields. The first is labeled "Classroom Code" and contains the text "ECON1B". Below this field is the instruction "Enter the code provided by your instructor." The second input field is labeled "Classroom Password" and contains seven dots. Below this field is the instruction "Enter the password provided by your instructor." At the bottom of the form is a green button labeled "Join" and a link labeled "Back to home" in blue text.

Join a Classroom

Classroom Code

ECON1B

Enter the code provided by your instructor.

Classroom Password

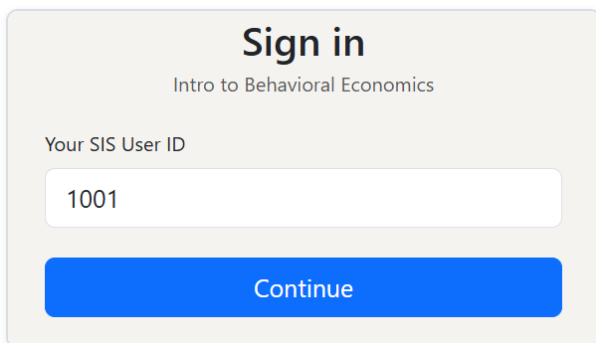

.....

Enter the password provided by your instructor.

Join

[Back to home](#)

- 2 Enter your **SIS User ID** and click **Continue**.

The form is titled "Sign in" in bold black text. Below the title is the text "Intro to Behavioral Economics". Below this is a label "Your SIS User ID" and an input field containing the number "1001". At the bottom of the form is a blue button labeled "Continue".

Sign in

Intro to Behavioral Economics

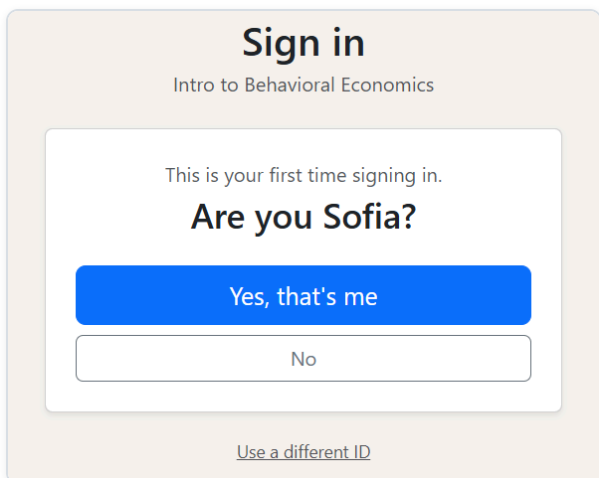

Your SIS User ID

1001

Continue

3

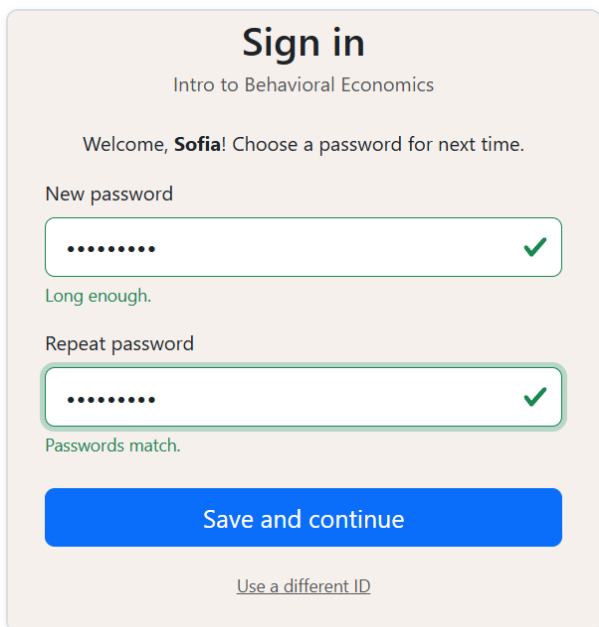

The first time, the site asks "**Are you [your first name]?**" Click **Yes, that's me**. If it shows someone else's name, click **No** and check your ID. Never sign in as a classmate.

The screenshot shows a 'Sign in' page for 'Intro to Behavioral Economics'. It asks 'This is your first time signing in. Are you Sofia?'. There are two buttons: a blue 'Yes, that's me' button and a white 'No' button. At the bottom, there is a link that says 'Use a different ID'.

4

Choose a password (at least 6 characters) and type it twice. A green check shows when both match. Click **Save and continue**. Next time, you sign in with your SIS User ID and this password.

The screenshot shows a 'Sign in' page for 'Intro to Behavioral Economics'. It says 'Welcome, Sofia! Choose a password for next time.' There are two password input fields. The first is labeled 'New password' and has a green checkmark next to it with the text 'Long enough.' below it. The second is labeled 'Repeat password' and also has a green checkmark next to it with the text 'Passwords match.' below it. At the bottom, there is a blue 'Save and continue' button and a link that says 'Use a different ID'.

"ID not found"? Check your ID and try again. If it still fails, email your instructor: you may not be on the roster yet.

2. Your lobby

After signing in you land in your lobby. Everything you need is there, and sections appear only when they're relevant.

Section	What it's for
Live Session	Join the surveys run in class. It shows LIVE in green when a survey is running.
Group invites	Invites from classmates to join their group. Accept or decline.
Open surveys	Surveys a group was allowed to run early. Answer them before their deadline.
My group	Your group's survey: members, status, warnings, number of responses and the data download.
Presentation order	Every group's survey, in the order they run and present in class.
Feedback for other groups	The groups you must comment on, and your comments.

3. Forming your group

Only one person per group creates the survey; everyone else waits for an invite. Each student can be in one group (unless your instructor says otherwise).

- 1** **One member** clicks **Create your group's survey** in the lobby. They're added to the group automatically, and the group gets its number automatically. That number is your place in the presentation order.
- 2** Under **Teammates**, they start typing each classmate's name, pick it from the list and click **Add**. Invites can also be sent later from the survey's page, under **Group Members**.

3

The other members accept the invite in their lobby, under **Group invites**.

Hi, Sofia!

My group

Group	Survey	Members	Status	Responses	
1	Anchoring and willingness to pay	2	Looks good	0	Edit Preview Leave

Presentation order

Surveys run in class in this order, and each group presents its own. The order can still change until your instructor locks surveys.

#	Survey	Group members
1	Anchoring and willingness to pay your group	Chen, Marcus; Rivera, Sofia
2	Gain vs. loss framing	Okafor, Amara; Novak, Lukas
3	Default effects in retirement saving	Patel, Priya; Kim, Daniel

"You can't accept this"? You're already in another group. Click **Leave** next to that group in your lobby first. The last member of a group can't leave; invite someone first or delete the survey. Once your instructor locks surveys and groups, membership can't change.

4. Designing your survey

A survey is one experiment: each respondent is randomly shown one **arm** (control or a treatment), and the arms differ only in what you want to test.

The screenshot shows the 'Edit Survey' interface. At the top right are two buttons: 'Preview survey' and 'Preview dashboard'. Below the title is a message: 'Your edits save automatically.' The 'Survey Details' section includes a 'Group 1' dropdown and a 'Survey Title' input field containing 'Anchoring and willingness to pay'. Below this is a toggle switch for 'We're running our survey on another platform (e.g., Google Forms)', which is currently turned off. A note explains that if turned on, the survey would be run on an external platform. The 'Arms (Treatment/Control Groups)' section has a '+ Add Arm' button. It lists two arms: 'Arm 1: Control' and 'Arm 2: High anchor', each with a 'Remove' button.

- 1 Arms (up to 4).** Name them, for example "Control" and "High anchor". Each respondent sees exactly one arm, and always the same one.
- 2 Questions.** Every arm has the same questions, but the wording, image and answer options can differ per arm. That difference is your treatment. Your instructor sets a maximum number of questions (shown next to **Questions**); short surveys get better answers.

- 3 Copy from Control.** Each arm after the first has this link. It copies the first arm's text, options and image, so you only change the part that differs.

The screenshot shows a survey editor interface. At the top, it says 'Questions up to 3; shorter surveys get better answers' and has a '+ Add Question' button. Below this is 'Question 1' with a 'Remove' button. The 'Type' is set to 'Numeric' and the 'Label (optional)' is 'Willingness to pay'. There are two arms: 'Control' and 'High anchor'. The 'Control' arm has a text input 'How much would you pay for a university coffee mug (in dollars)?' and a 'Copy from Control' link. The 'High anchor' arm has a text input 'Most students pay \$25 for a university coffee mug. How much would you pay (in dollars)?'.

- 4 Images** (PNG or JPEG, up to 5 MB) are optional, per arm and question.
- 5 Warnings.** The page warns you if two arms are identical in every question, which means there's no treatment.

Question type	Respondents see	Results show
Multiple choice	buttons, pick one	bar chart by arm
Multiple answer	buttons, pick several	bar chart by arm
Numeric	a number box	histogram and mean, median, SD by arm
Slider	a slider with your min, max and step	histogram and statistics by arm
Short answer	a text box (140 characters)	the answers by arm, identical ones grouped

Example. To test anchoring: two arms, one numeric question. Control asks "How much would you pay for this mug?" The "High anchor" arm asks "Most students pay \$25 for this mug. How much would you pay?"

Saving. After you create the survey, your edits save automatically: the bar at the top says when. If something's missing, it says what ("Not saved yet: Question 2 needs text"). **Discard all changes from this session** puts the survey back the way it was when you opened it in that tab. Teammates editing at the same time overwrite each other, so take turns.

Group members. The bottom of the survey page lists your group and lets you invite more classmates.

The screenshot shows the 'Group Members' section. It lists two members: 'Chen, Marcus' and 'Rivera, Sofia (you)'. Below the list is an input field 'Invite a classmate by name' and a 'Send invite' button.

5. Running your survey on another platform

With your instructor's permission, your group can run its survey somewhere else, such as Google Forms. In that case **your group** randomizes the versions and emails them to classmates; this site won't run your survey.

- 1 Create your group's survey as usual (so the group and its members are registered), and give it a title.
- 2 Turn on **We're running our survey on another platform**. The arms and questions disappear and are no longer required.
- 3 Optionally, describe how you're running it. Classmates see this note when they give you feedback.

The screenshot shows a 'Survey Details' form. At the top, there's a section for 'Group 1' with a 'Survey Title' field containing the text 'Anchoring and willingness to pay'. Below this is a toggle switch labeled 'We're running our survey on another platform (e.g., Google Forms)', which is currently turned on. A note below the toggle explains that only if the instructor agrees, the group randomizes versions and emails them to classmates, and that there will be no live results. Underneath, there's an optional field 'How you're running it (optional)' which contains the text: 'Two Google Forms. We email each half of the class one version; version B adds a \$25 anchor.'

You keep your place in the presentation order, present in your turn and get peer feedback like every other group. There are no live results in class, so bring your own. Anything you'd already built here is kept: turning the switch off brings it back.

6. Previewing before class

Check your survey from both sides before it's locked. Nothing you do in a preview is saved.

- 1 **Preview survey** (top of the survey page) shows exactly what a respondent sees on their phone, for the arm you pick. Switch arms with the buttons at the top.

Preview: this is what a respondent in **High anchor** sees. Answers are not saved. [Control](#) [High anchor](#)

Group 1

Anchoring and willingness to pay

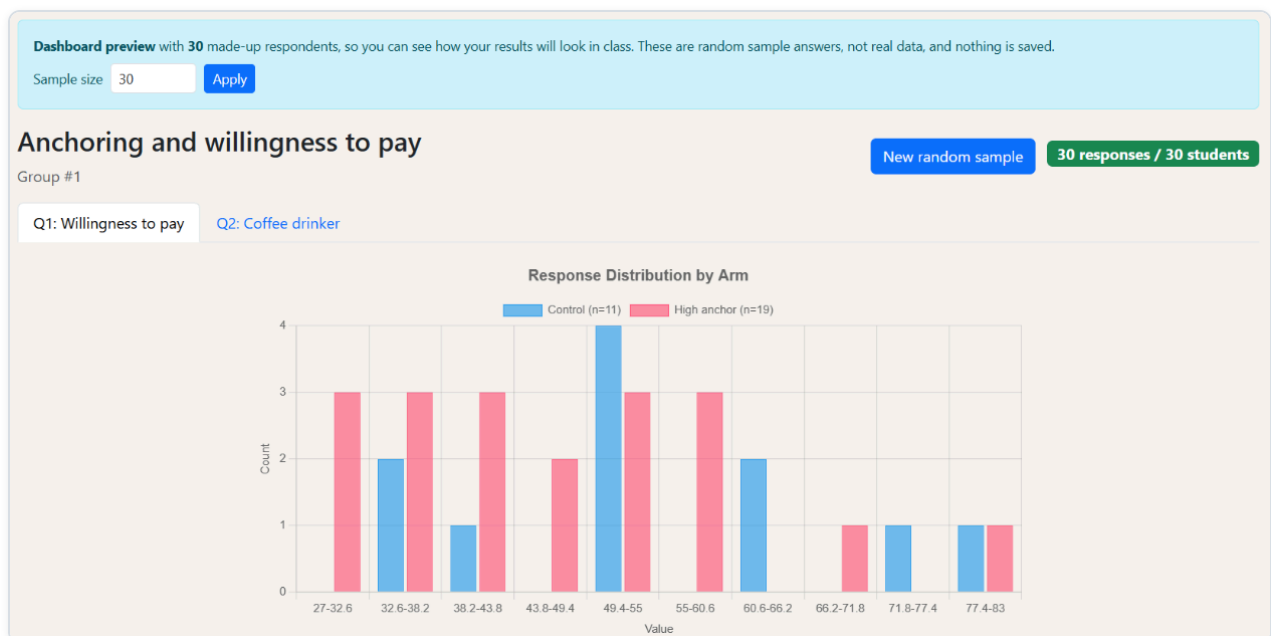

Question 1 of 2

Question 1: Willingness to pay

Most students pay \$25 for a university coffee mug. How much would you pay (in dollars)?

[Previous](#) [Next](#)

- 2 **Preview dashboard** shows the charts and tables that will be projected in class, filled with made-up responses. Change the sample size, or click **New random sample** to see how results vary.

7. Presentation order

Your lobby lists every group's survey in the order they run in class, with each group's members. Your group is highlighted, so you know when you present. Groups running their survey on another platform are marked **Other platform: no live results**; they still present in their turn. The order can change until your instructor locks surveys.

Group 2

Gain vs. loss framing

Question 1 of 1

Question 1: Program choice

A new disease is expected to affect 600 people. With Program A, 400 people die for sure. With Program B, there is a 1/3 chance nobody dies and a 2/3 chance all 600 die. Which do you choose?

Program A

Program B

Previous Next

Submit All Answers

3

Wait for the next one. Keep the page open; there's no need to refresh.

Notes for feedback. After you submit, a small link appears: **Add a note for your feedback (optional)**. Jot down your thoughts while they're fresh. Only you can see the note, and it becomes your draft comment for that group.

Answer submitted!

Waiting for the next survey...

↻

 [Add a note for your feedback \(optional\)](#)

Clear framing manipulation. Maybe ask how confident people are in their choice?

Saved. You'll find it in your lobby. [Save note](#)

Your own group's survey: you may see "You designed this survey" instead of the questions; designers usually don't answer their own experiment. If you see "Your answer was not saved", tap **Submit** again.

9. Peer feedback

Part of your grade is commenting on other groups' experiments: at least the groups you're assigned, marked **required**. Groups are assigned at random so every group gets about the same number of reviewers, and never your own.

Feedback for other groups 0 of 2 required sent

Write at least one comment for each required group. Comments are **anonymous** to the groups, and they'll see them after feedback closes. You can edit sent comments until then.

Group 3: Default effects in retirement saving required View survey

What worked? What could be improved: the design, the treatment, the questions, the wording?

Send Save draft

Group 2: Gain vs. loss framing required draft View survey

Clear framing manipulation. Maybe ask how confident people are in their choice?

- **You'll see your assigned groups as soon as surveys are locked**, before comments open. Pay close attention to their presentations in class.
- **View survey** shows all of a group's arms side by side, so you can compare what each arm saw. For a group that ran its survey on another platform, it shows their description instead.
- **Save draft** works at any time and is private. Notes you took in class appear here as drafts.
- **Send** works once your instructor opens comments. You can keep editing a sent comment until comments close.
- **Comment on another group** adds extra comments; you can remove extras, but not required ones.
- The counter ("1 of 2 required sent") shows your progress.

Group 2 See it as a respondent

Gain vs. loss framing
2 arms: each respondent was randomly shown one of them.

Question 1: Program choice Multiple choice

Gain frame
A new disease is expected to affect 600 people. Program A saves 200 people for sure. Program B has a 1/3 chance of saving all 600 and a 2/3 chance of saving no one. Which do you choose?

- Program A
- Program B

Loss frame
A new disease is expected to affect 600 people. With Program A, 400 people die for sure. With Program B, there is a 1/3 chance nobody dies and a 2/3 chance all 600 die. Which do you choose?

- Program A
- Program B

Comments are **anonymous** to the groups: they see "Reviewer 1, Reviewer 2", while your instructor sees names for grading. Groups read their comments only after comments close. Good comments are specific: what works, and one concrete change to the design, wording or treatment.

10. Downloading your data

After your survey runs, download its responses from your lobby (the number in the **Responses** column) or from the bottom of the survey page. Downloads keep working after surveys are locked.

My group					
Group	Survey	Members	Status	Responses	
1	Anchoring and willingness to pay	2	Looks good	6 ↓ CSV	<button>Open</button> <button>Preview</button>

The file is a CSV that opens in Excel, Google Sheets, R or Stata, with one row per respondent:

```
respondent_id,arm,Q1 Willingness to pay (numeric)
R-7KQ2PX,Control,8
R-M4TW9A,High anchor,20
```

Respondents appear only as random IDs, never by name. Compare the answers across arms: that difference is your treatment effect. The **Survey Config** download lists what each arm showed. Groups that ran their survey on another platform collect their own data there.

11. Troubleshooting

Problem	What to do
Forgot your password	Ask your instructor to reset it. Then sign in with your ID and choose a new one.
"ID not found"	Check the ID. If it's right, email your instructor to be added to the roster.
It says "Welcome back" and asks for a password, but you never signed in	Email your instructor right away; they'll reset it.
Can't edit your survey	Surveys are locked (lock notice at the top), or your group submitted it early. Ask your instructor.
"Saving deletes responses" warning	Your survey already has answers. Download them before changing anything.
Survey doesn't appear in class	Wait a few seconds; the page checks every 3 seconds. If it still doesn't show, go back to the lobby and click Join again.
Can't accept an invite	You're already in a group. Leave it first, or ask the inviter to check.
